 - b. Zulma Esperanza Mena Aguilar (Ministry of Environment and Natural Resources, El Salvador)
 - c. Representative from Guatemala

18:50

Closing

- **Message from Asia**
 - a. Helmi Basalamah (Director General of Watershed Management and Forest Rehabilitation, Ministry of Environment and Forestry, Indonesia)
 - b. Kotaro Kawamata (Director, Water Environment Management Division, Ministry of the Environment, Japan)
 - c. Report on the International Webinar on Mainstreaming Lakes in the Global Agenda by A. Santos-Borja (Vice Chair, ILEC Scientific Committee)
- **The “Way Forward” and Closing**

“Mainstreaming Lakes and Wetlands in the Global Water Agenda and SDGs”

Background and Purpose

This Special Session will highlight UNEP and ILEC programs and activities regarding the state of the world’s lakes and wetlands, and the management challenges to their sustainable use, as well as highlighting their essential roles in achieving the SDGs. It also highlights the urgent need to recognize them as a significant missing link in the Global Water Agenda. The Session will introduce a brochure and also a revised version of the “Call to Action Statement” on this topic. Other Session components include a global overview of the state of the world’s wetlands, and global eutrophication trends and health impacts. Relevant perspectives on mainstreaming lakes needs will be provided by Latin American, Asia and African representatives, and highlights from a range of clips from government and international organizations participating in a previous global webinar on this topic will be presented.

In addition to messages previously received from WHO, FAO and other UN/UN-related international agencies such as the World Bank, Global Environment Facility (GEF) and various international scientific organizations and NGOs, including the International Society of Limnology (SIL) and Global Nature Fund (GNF), will also provide their perspectives and support for this initiative. The Session will be closed by recognizing the importance of continued efforts to realize productive deliberations at forthcoming global meetings, including the 5th United Nations Assembly (UNEA5) planned for February 2022 and the 9th World Water Forum planned for March 2022.
